— CORE SKILLS

Agent Engineering
Agent Harness · Function Calling · MCP · Skills / Tools · Context Management · Sandboxing · RBAC / Audit Log

Evaluation & Validation
Golden Set / Held-out · Code Validators · Regression Baseline · Failure Analysis

LLM & Retrieval
Gemini API · Azure OpenAI · Prompt Engineering · RAG · Knowledge Graph (Neo4j) · pgvector

Document AI / ML / CV
Azure Document Intelligence · OCR + LLM Extraction · YOLOv8 · PyTorch

Backend & Web
Python · FastAPI · Node.js · React · TypeScript · PostgreSQL · SQL Server

DevOps & Tools
Docker · GCP · Azure · Git · Claude Code

Security
AES-256-GCM · JWT · AD / Entra ID · ISO 27001

— EDUCATION

National Taiwan University
M.S. Biomechatronics Eng. (AIoT / CV) · 2021 – 2023

National Taipei University of Technology
B.S. Mechanical Engineering · 2017 – 2021

AI application engineer who designs, validates and maintains enterprise AI systems in manufacturing. Architect and lead developer of BenQ Materials' on-prem AI data-analysis platform (Claude Code–style agent harness, in daily production use); earlier built the company's document-AI stack from zero. Every system is checked against a labelled test set or the system it replaces.

4.15M NTD	6	~1M NTD	1,500+ h

— EXPERIENCE

AI Application R&D Engineer

Dec 2024 – Present

BenQ Materials Corp. (明基材料) · Digital Technology Center, Intelligent Application Dept., Intelligent Application Development Sec. · Taoyuan, Taiwan

- **Enterprise Brain → AI data-analysis platform** (system architect & lead developer) — live and used daily by the BML polarizer line, replacing a purchased AutoML package (**4.15M NTD / 2 yrs**); 6 line report flows cut over with zero downtime. FastAPI + Gemini + MCP, 10 Docker services, on-prem.

Data → analysis → knowledge. Purple box: the shared skill I designed.

	Before (n8n)	After (one skill)
Analysis logic	copied across 6 workflows, ~550 nodes	**1 skill shared by all 3 entry points**
New analysis method	edit every workflow	**teammate supplies the logic; wired in once**
New data source	clone a whole workflow	**map the data to the input contract (7 sources so far)**
StatRecipe (SR)	a separate node chain	**ported as one skill method**
Cutover check	—	**Excel 9/9 cell-identical to old emails; identical PDFs**

- **Design** — teammates supply only the calculation logic; I wrap it as a skill method with validation, LLM interpretation and reports. Code computes the stats; the LLM only explains them, so its failure never blocks the numbers. Claude Code's skill format, so methods deploy unchanged.
- **Reliability & safety** — long chats auto-summarized, failed tools retried with the error fed back to the model, max 10 tool calls per question; role-based tools, company rules enforced in code, sandboxed execution, tamper-proof audit log.
- **Knowledge loop** — the graph already holds the 6 OCAP defect-handling flows I built; chat Q&A opens once it matures.

— LANGUAGES

Mandarin Chinese — Native
English — Professional (TOEIC 790)
German — A2

— CERTIFICATIONS

Company Digital Talent L3 (Expert)
Military service completed

— EARLIER PROJECT

Autonomous navigation with Autoware / ROS
B.S. capstone, NTUT · 2020 – 2021
Indoor/outdoor self-driving platform (mapping, localization, path planning) with an ML mask-detection module.

Chou, C.-Y., **Chang, S.-C.**, et al. (2023). Development of AIoT system for facility asparagus cultivation. *Computers and Electronics in Agriculture*, 206:107665. *(co-first author with advisor)*

Chang, S.-C., et al. (2022). AIoT based pest counting system for asparagus cultivation. *Proc. 10th ISMAB*.

Taiwan Invention Patent TW I842416 B — Crop Harvester, 2024.

— EXPERIENCE (CONT.)

BenQ Materials — Document AI & other systems

Dec 2024 – Present

- **Document-AI applications (OCR + LLM)** — built the company's platform from zero (Azure Document Intelligence + Azure OpenAI, FastAPI, React, SQL Server) and the reusable OCR → LLM → validation → feedback pipeline; each system scored on a hand-labelled test set before go-live.
  - **Quotation OCR** — validity-date accuracy **51% → 100%** (29-document regression set; quote date 86%); 30 s → 10 s per document; 758+ documents processed.
  - **Taiwan & China invoice OCR** — **31/32** (5 key fields all correct, incl. handwritten) and **31/31** (10 fields); saves 1,447 h/yr; live at 3 sites.
  - **Health-check OCR platform** — **97.4%** field-level accuracy (42 reports × 46 fields), 216 reports processed; AES-256-GCM, AD + JWT, RBAC and audit logging to ISO 27001.
  - **APO-OCR prompt-optimization engine** — designed the eval-driven loop: 32-invoice golden set (24 train / 8 held-out, 3 leakage paths removed), code-scored fields (LLM only proposes), budget/loop/failure breakers. Mentored an intern to ship it: **8/8** held-out, tying the hand-tuned prompt, for $1.44; a 7/8 run traced to a date format missing from training.
- **Google Cloud Platform — supplier questionnaire management system** (live) — React 19 + Cloud Functions + Firestore; 52 APIs, Entra ID login, built solo in 4.5 months, handed over with GCP training.
- **ESG carbon & energy platform refactor — 44K → 6K lines**, 5 → 1 hosts, validated web upload instead of a personal-PC import.

Shift Supervisor (值班股長)

Jan 2024 – Nov 2024

China Steel Corporation (中國鋼鐵) · Cold-Rolling Mill · Kaohsiung, Taiwan

- **Ran shift operations** on the cold-rolled coil line, keeping production continuous at **95% yield**.
- **Anomaly analysis** — rolling force, tension, speed, temperature and quality data; SPC, trend and correlation analysis for root causes of defects and downtime.
- **Anomaly & defect reports** (Python / Excel) for daily production meetings — the domain base for the later production-line AI platform.

— RESEARCH & SELECTED PROJECTS

AIoT Pest Monitoring & Bee Pollination (M.S. thesis, NTU)

2021 – 2023

Lead developer of greenhouse AIoT systems: YOLOv8 + StrongSORT bee tracking (*99.5% mAP*), Mask R-CNN pollen segmentation, deep-learning pest counting (*95.8%*), kriging-based climate control.

PyTorch · YOLOv8 · StrongSORT · Mask R-CNN · IoT · Kriging

Universal OCR Platform — no-code OCR builder (side project)

2025 – 2026

Define fields and prompts, run a 7-step OCR → LLM pipeline, deploy as a REST API; three cloud variants (FastAPI · React 19 · Supabase · Cloud Run).
